Management Accounting Al Bhimani 2009-09-16

Management Accounting is part of the celebrations to mark CIMA's 90th anniversary in 2009. It looks at the development of cost and management accounting from the founding of the Institute to today. It considers a number of immediate challenges to management accountants and surveys a range of issues and challenges that will likely affect

management accounting thought and practice in the future. The authors examine the possibilities for accountants to widen their focus and become more familiar with the enterprise technology determining their organisations' cost structures and with the effects of multiple production in various locations, such as economies or diseconomies of scale. Such change may require the alteration of traditional cost models used by accountants to become more nuanced. The book suggests how this may be accomplished and highlights the need for management accountants to work as part of management teams throughout the organisation as business partners rather than remain grounded in specialist information provision roles.

Alnoor Bhimani is Professor of Management Accounting at the London School of Economics. He is also a Certified Management Accountant as well as an author of 15 books and over 100 articles. Michael Bromwich was CIMA's Professor of Accounting and Financial

Management at the London School of Economics and Political Science (1985 to 2006), now Emeritus. He is a Past President of CIMA (1987/88) and currently serves on CIMA's Technical Committee. A unique survey of 90 years of CIMA research Analyses the research to determine future challenges for management accounting and business practices Charts the history of management accountancy and business practice over nearly 100 years

To bring transparency to their value chain, they need costing approaches that help them find their own improvements. Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (SBC) approach. This hybrid-costing model has a hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.

Implementing Management Innovations Shannon W.

Anderson 2012-12-06

Implementing Management Innovations: Lessons Learned from Activity Based Costing in the U.S. Automobile Industry is the result of a long-term study of the implementation of activity based costing (ABC) inside two of America's largest automobile companies. The research advances our theoretical and practical understanding of the implementation of management innovations by tracing the evolution of ABC from the corporate level down to its eventual rollout at the plants. Another distinguishing feature of the study is the blend of field research methods and

hypothesis testing to determine the factors that led to implementation success for managers and ABC development teams. Many of the findings of the study have implications for the implementation of other types of management innovations.
